

Buttons

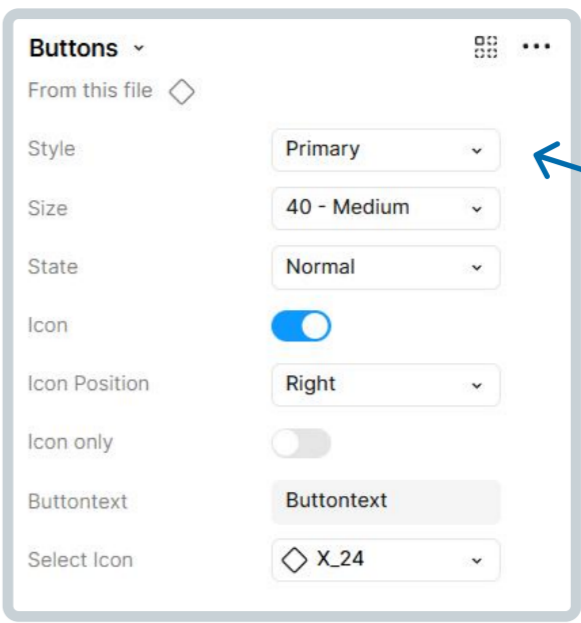

Overview

This page provides details about available button styles, layout variants and sizes.

Important note for designers:

The “Buttons”-Component encompasses all necessary variants. **Always** use this component in your designs. **DO NOT** construct your own button components.

In the rare case that new sizes/variants are needed, update the “Buttons”-Component accordingly.

Every style/size variant can easily be accessed via variables.

Styles

Buttons come in 2 different styles: Primary and secondary.

Secondary styles are often used in combination with a primary style button. This allows you to “highlight” the most important (i.e. “primary”) action in a given set of choices. The most popular pairing would be a “Save” (Primary) and “Cancel” (Secondary) button next to each other, with “Save” being the action we want to highlight. More information can be found in the “button bar” section below.

Primary

Secondary

Note:

Secondary and primary buttons have the same active state.

Dark mode - Primary

Dark mode - Secondary

Variants & construction

Layout variants

Four different variants are provided. Each of the variants is available for both, Primary and Secondary button styles.

- Text only
- Icon right
- Icon left
- Icon only

Sizes & Construction

Buttons mainly use a **flexible width**. However, they may also be set to a fixed with, e.g. in narrow modals/popups or when using vertical button bars. In this case the text (and optional icon) is centered.

Medium, 40px height

This is the **primary button size**. Use other button sizes sparingly and only in dedicated areas.

Text only

Button text

16 16px, Semibold (600) 16

line-height: 24px;
corner-radius: 4px;

Icon

Button text X

16 16px, Semibold (600) 16

Icon: 16px
line-height: 24px;
corner-radius: 4px;

Icon only

X

Icon: 24px

Note: This variant uses a 24x24px icon.

Small, 32px height

Text only

Button text

12 12px, Semibold (600) 12

line-height: 16px;
corner-radius: 4px;

Icon

Button text X

12 12px, Semibold (600) 12

Icon: 16px
line-height: 16px;
corner-radius: 4px;

Icon only

X

Icon: 16px

Note: This variant uses a 16x16px icon.

Large, 48px height

Text only

Button text

24 16px, Semibold (600) 24

line-height: 24px;
corner-radius: 4px;

Icon

Button text X

24 16px, Semibold (600) 12 24

Icon: 16px
line-height: 24px;
corner-radius: 4px;

Icon only

X

Icon: 32px

Note: This variant uses a 32x32px icon.

Button bar

Button bars are used when a **user can choose between different actions** to e.g. resolve a dialogue, and thus **mainly found in modals**.

Button bars should provide the user with a **maximum of 3 (horizontal) or 2 (vertical) available actions**. Vertical button bars span over the entire width of the modal. If a **primary action** exists (e.g. “Save” VS “Cancel”, where save would be the primary option), it is highlighted by using the primary button style, whereas the other options use the secondary button style. **Only one action can be defined as primary.**

All available button sizes can be used for a button bar, but within the same button bar, the button size must be consistent.
