

Basic Grid

Spacings/Grid: 4/8px system

All layout and component constructions are based on standard distances (see below). These standard distances use a 4px (if smaller than 16px) or an 8px (if larger than 16px) system.

In practice, this simply means to use increments of 4px/8px to size and space out the elements on a page. Any defined height or width should be divisible by 4, including padding, margins and line heights. Thanks to this narrow set of variables, items within a page will align effortlessly and follow a consistent pattern. A range of “**Spacer**”-Components (see above) is available to assist with spacing if necessary.

Example

Welcome

The form consists of the following components:

- Username:** Input field with a placeholder and a red asterisk.
- Password:** Input field with a placeholder and a red asterisk.
- Language:** Input field with a dropdown arrow and a red asterisk.
- Forgot password:** Link located between the Password and Language fields.
- Login:** Large blue button at the bottom.

Workflow suggestion:

In Figma, you can create **Auto layouts** to set paddings and margins automatically. Using this feature will save you a lot of time when constructing UI elements / designing pages.

Basic layout - App anatomy

Overview

Our applications integrate three core navigation elements:

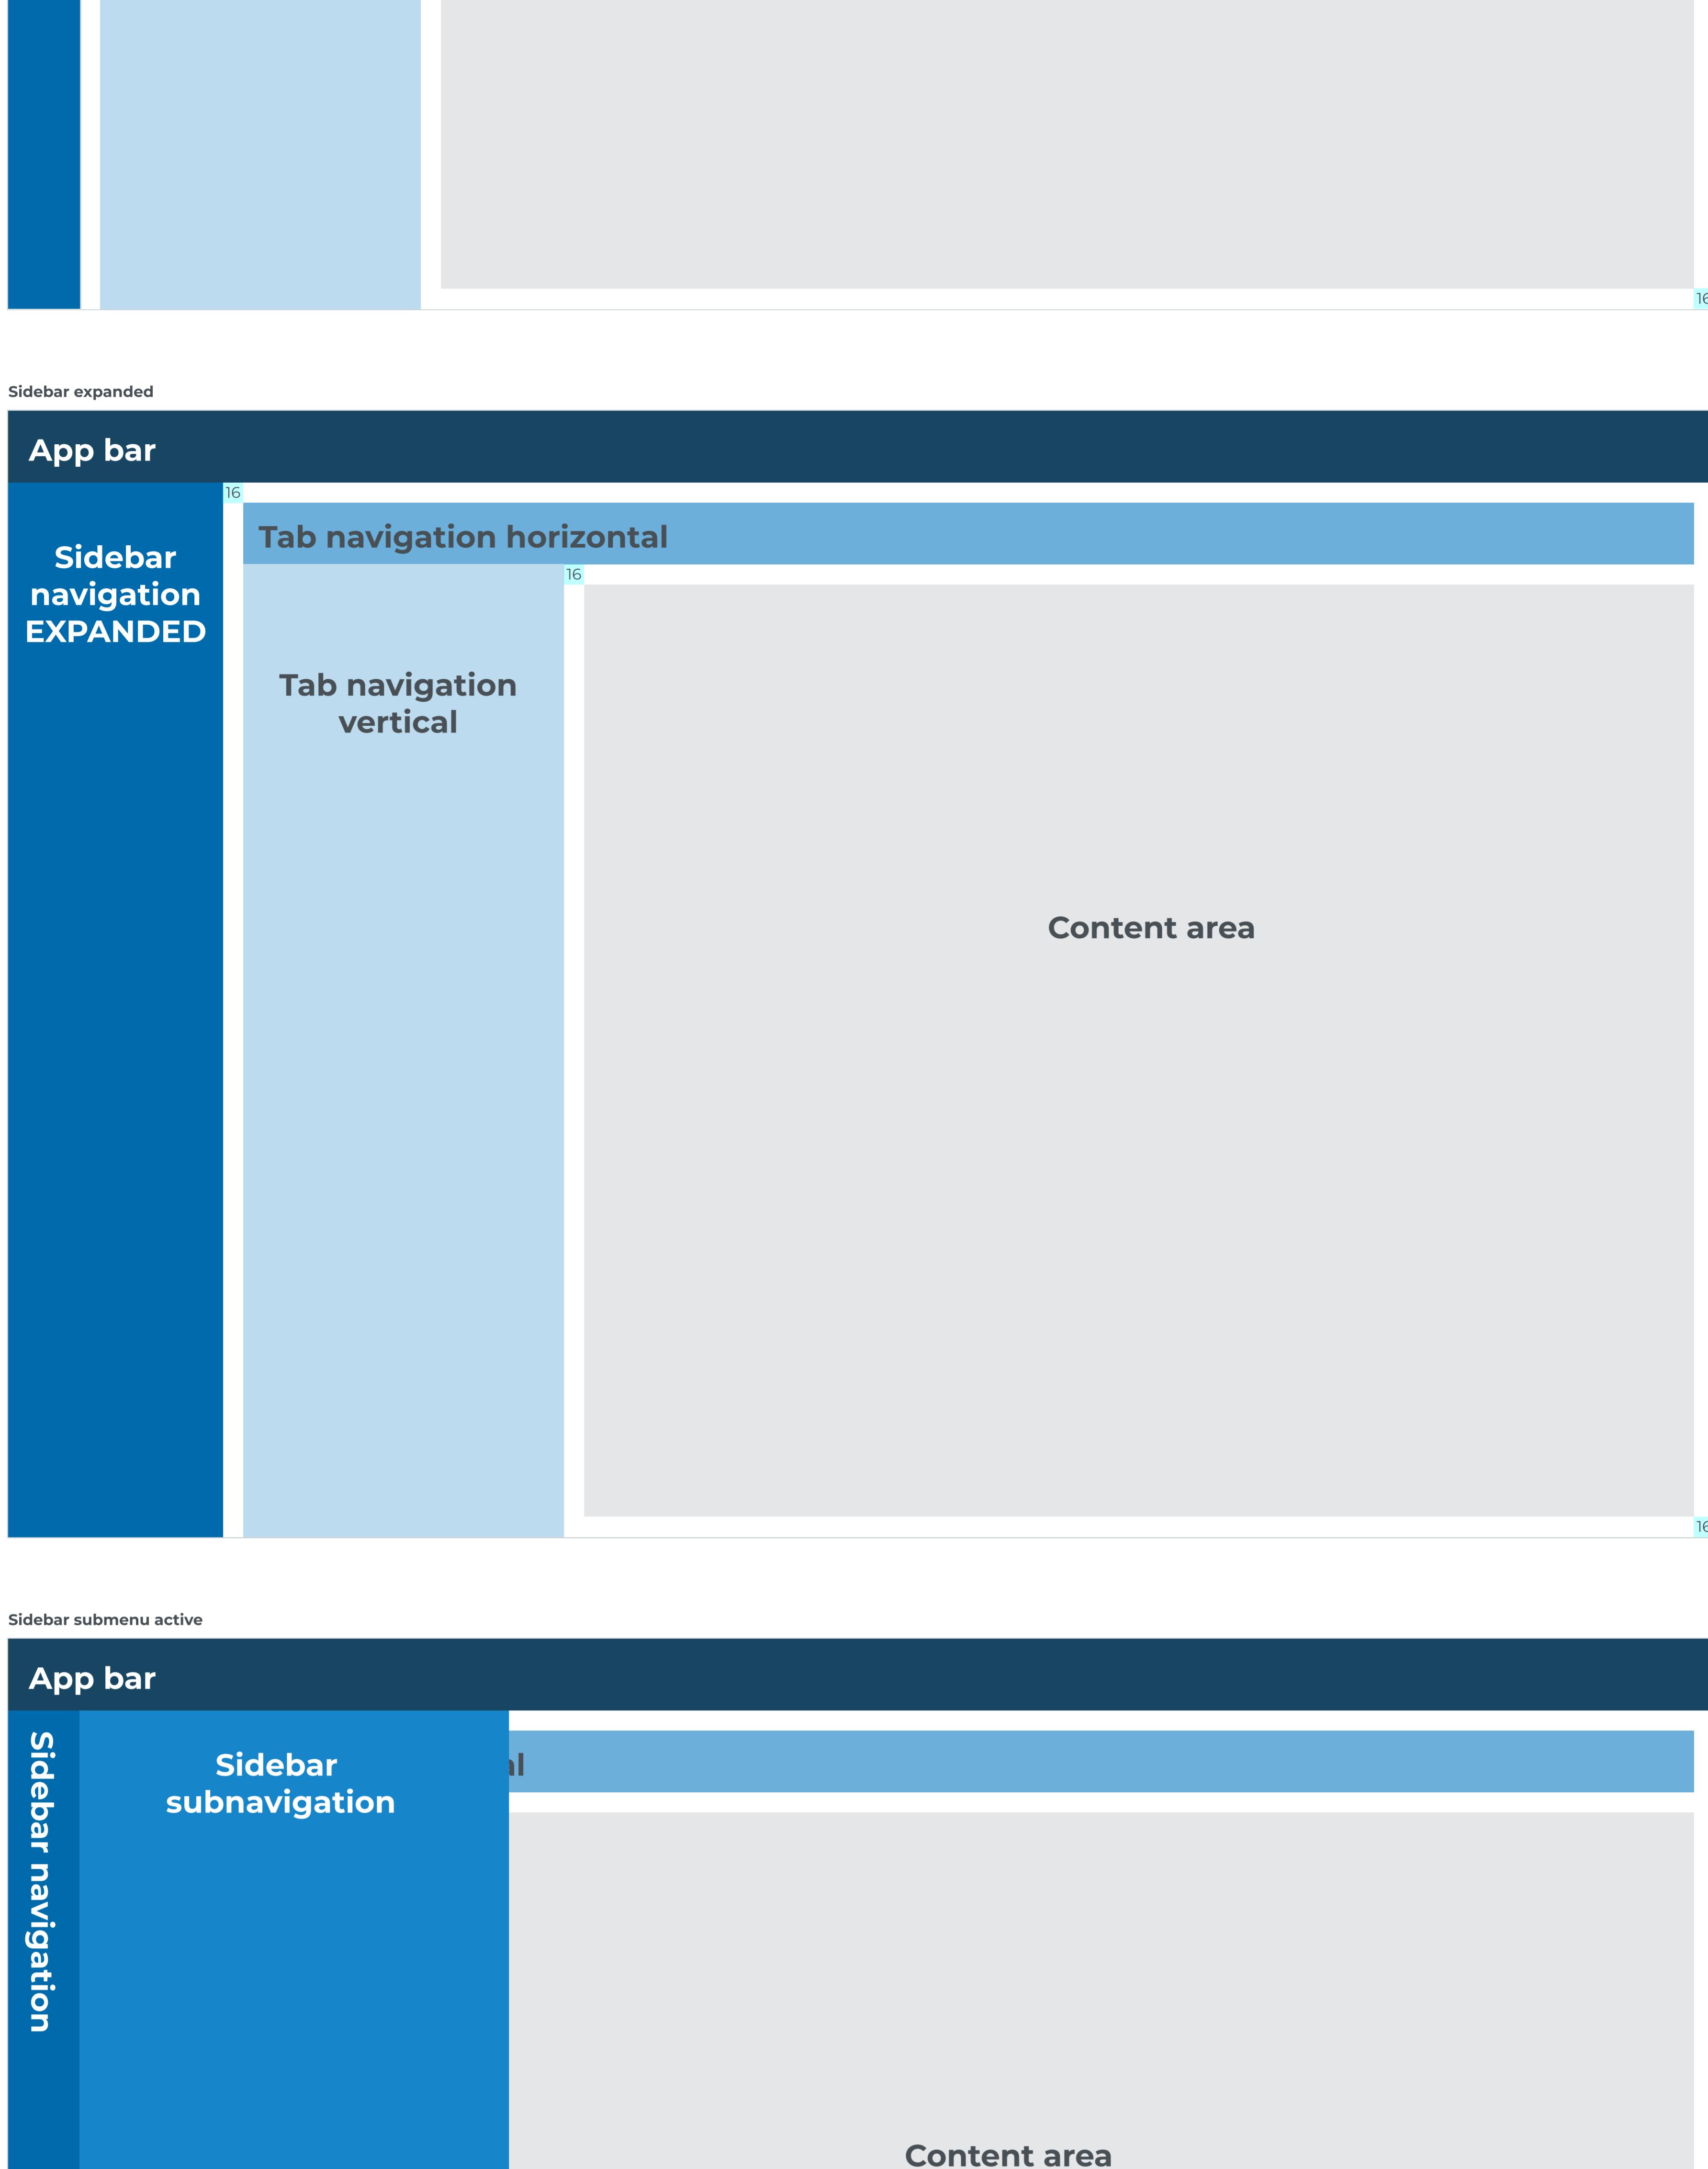

- **App bar** (Logo, page title, app specific functions)
- **Sidebar navigation** (multiple levels) - primary navigation
- **Tab navigation** (multiple levels) - secondary navigation

The default spacing between elements is 16px.
Detailed information on the sidebar/tab navigation can be found in the "Navigation" page.

Note:
Applications that fall under the **Minimal Adherence layer** may omit any navigation element that is not applicable to their app structure. If possible, they should try to integrate the styling of navigation items provided in the "Navigation" page.

Applications that fall under the **Mandatory layer** must adhere to the navigation structure as well as all the rules defined under "Navigation".
