Steps / Progress

Overview

Steps guide users through complex processes. They provide orientation and information regarding the total number of steps are well as the current progress. A "step" consists of 3 elements:

1. Steps / Progress bar
2. Step content (1-2 columns)
3. Action bar

Steps only allow for linear progress. This means that users cannot skip ahead but have to complete each step before being able to move to the next. Once a step has been completed, it can be clicked to reach and edit its contents.

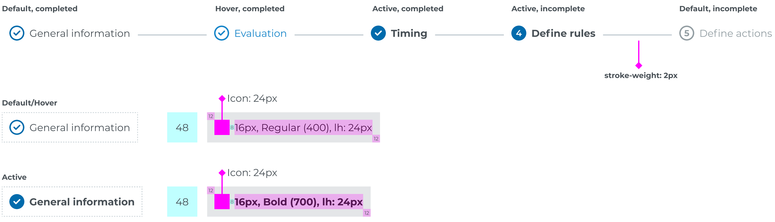
Variants & construction

Steps / progress bar

The steps / progress bar spans over the entire available horizontal screenspace. Step items have a variable width, depending on their text length. They are connected through lines which use up the remaining available screenspace. Only one step item can be active at a time.



Action bar

The action bar allows user to proceed to the next step, save their progress or cancel the process (and discard all changes). Starting from step 2, a back button is introduced as well.
